- A work schedule.
- The Permit Fee as set forth in our fee schedule.

*In addition to the Processing Fee, a Permit Fee is applied which is based on the cost of the valuation of work.

**Fees are doubled if work begins before the issuance of a valid permit.

Comments:

Typical erosion and sediment control measures for residential lot:

1. Perimeter Control: The disturbed area must be completely enclosed by a silt-trapping device such as a silt fence, or other approved material.
2. All drainage inlet and structures on site or adjacent to the site must be protected during construction.
3. Drainage patterns should not be affected to the detriment of the neighboring lots.
4. Prevent transport of mud and sediment by vehicular tracking onto the paved public roadway.
5. All denuded areas on the lot shall:
 - a. be stabilized within seven (7) days of the final grading with permanent vegetation or a protective ground cover suitable for the time of year;
 - b. Receive temporary soil stabilization if not at final grade but will remain dormant for longer than 30 days;
 - c. Receive permanent stabilization if they are to be left dormant for more than one year.
6. Control waste such as discarded building materials, concrete truck washout, chemicals, litter and sanitary waste.
7. Other additional measures may be required depending on the site-specific conditions.

NOTE:

- All specified erosion and sediment control measures must be placed prior to or as the first step in construction.
- The City Inspector will periodically inspect the site to ensure compliance with the erosion and sediment control regulations.
- The Contractor shall inspect all erosion control measures periodically and after each runoff producing rainfall event. Any necessary repairs or cleanup to maintain the effectiveness of the erosion control devices shall be made immediately.
- The permit may be revoked if the project is found to not be in compliance.
